EXPERIMENT -3

AIM

To create an Employee–Department–Project relational database, insert at least 30 employees across 5 departments and 8 projects, and demonstrate SQL queries using **Selection, Projection, Aggregate Functions, GROUP BY, HAVING, CASE expressions, and ORDER BY**.

```
CREATE DATABASE CompanyDB;

USE CompanyDB;

    dept_id INT PRIMARY KEY,
    dept_name VARCHAR(50) NOT NULL
);

    project_name VARCHAR(100) NOT NULL,
    budget DECIMAL(12,2),
    dept_id INT,
    FOREIGN KEY (dept_id) REFERENCES Department(dept_id)
);

CREATE TABLE Employee (
    emp_id INT PRIMARY KEY,
    emp_name VARCHAR(50) NOT NULL,
    salary DECIMAL(10,2),

SQL QUERIES

1. Selection

Display employees whose salary is greater than 70,000.

```
SELECT *
FROM Employee
WHERE salary > 70000;
```

OUTPUT

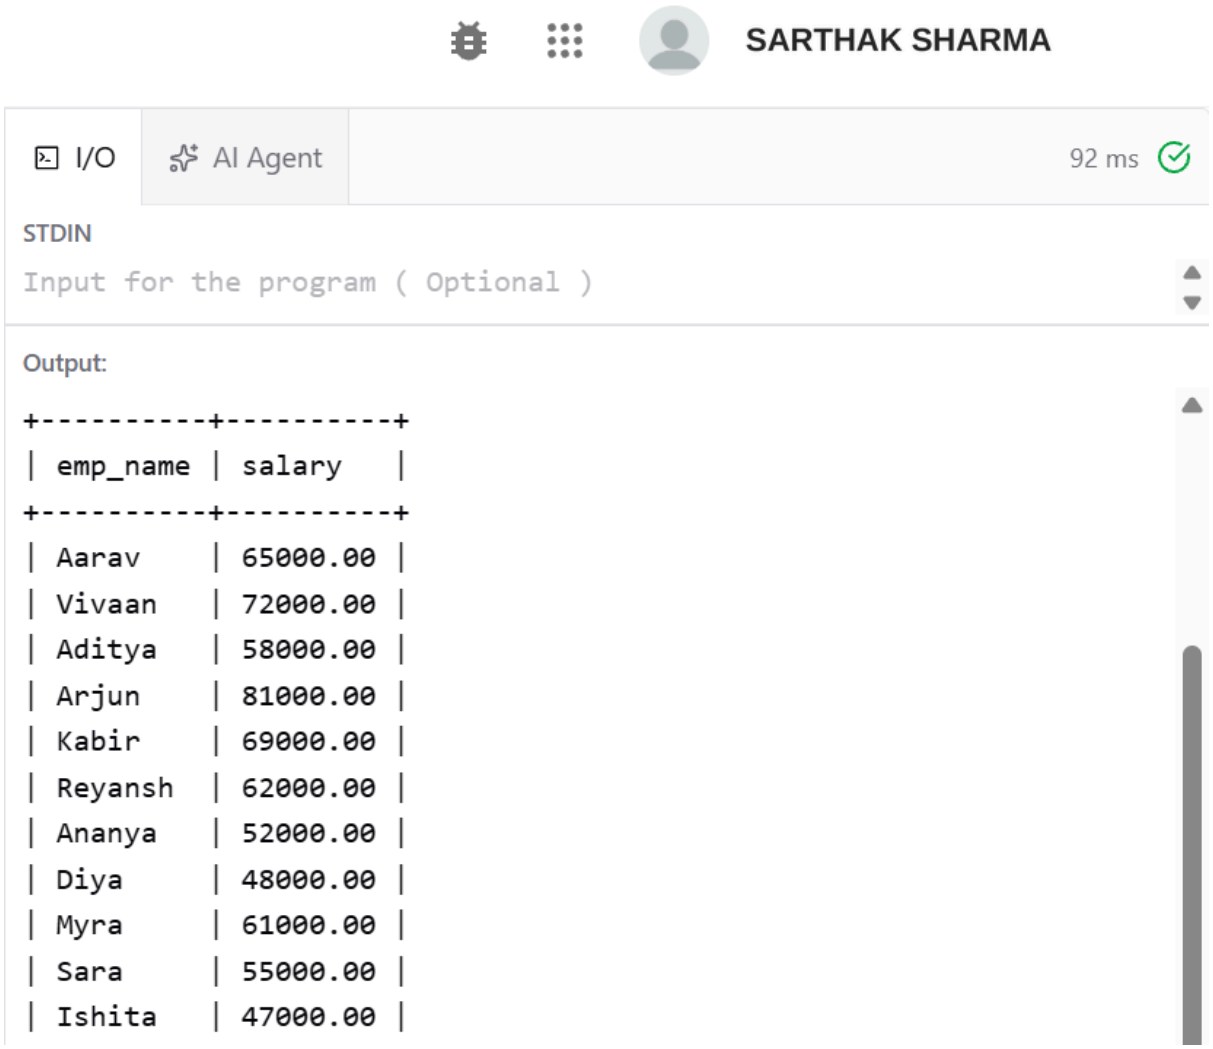

emp_id	emp_name	salary	hire_date	dept_id	project_id
2	Vivaan	72000.00	2021-03-15	1	102
4	Arjun	81000.00	2020-08-12	1	101
13	Rohan	75000.00	2021-02-17	3	104
15	Nikhil	83000.00	2019-10-21	3	104
17	Manav	71000.00	2021-11-28	3	104
26	Dhruv	73000.00	2020-04-23	5	106
29	Rudra	76000.00	2019-08-31	5	106

2. Projection

Display only employee names and salaries.

```
SELECT emp_name, salary
FROM Employee;
```

OUTPUT

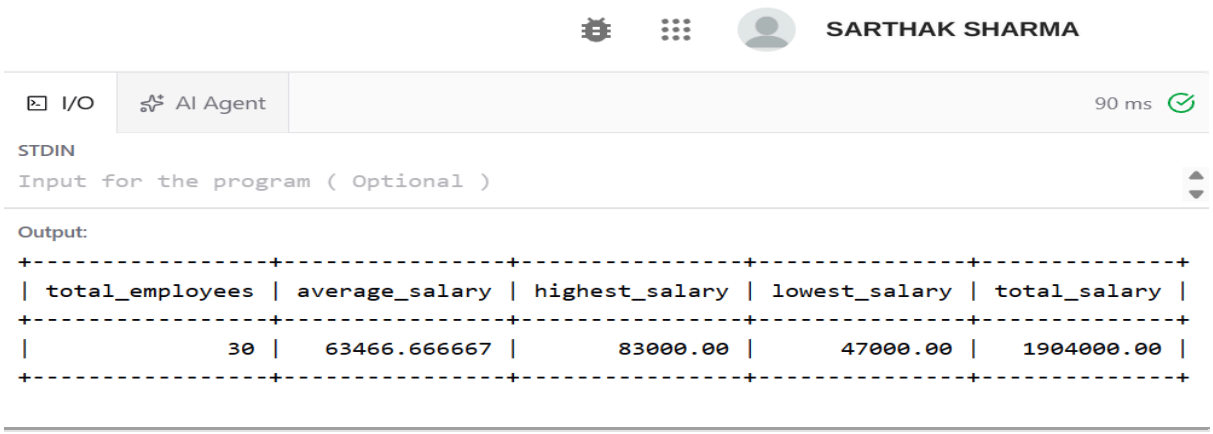

---

3. Aggregate Functions

Find total employees, average salary, maximum salary, minimum salary and total salary.

```
SELECT
    COUNT(*) AS total_employees,
    AVG(salary) AS average_salary,
    MAX(salary) AS highest_salary,
    MIN(salary) AS lowest_salary,
    SUM(salary) AS total_salary
FROM Employee;
```

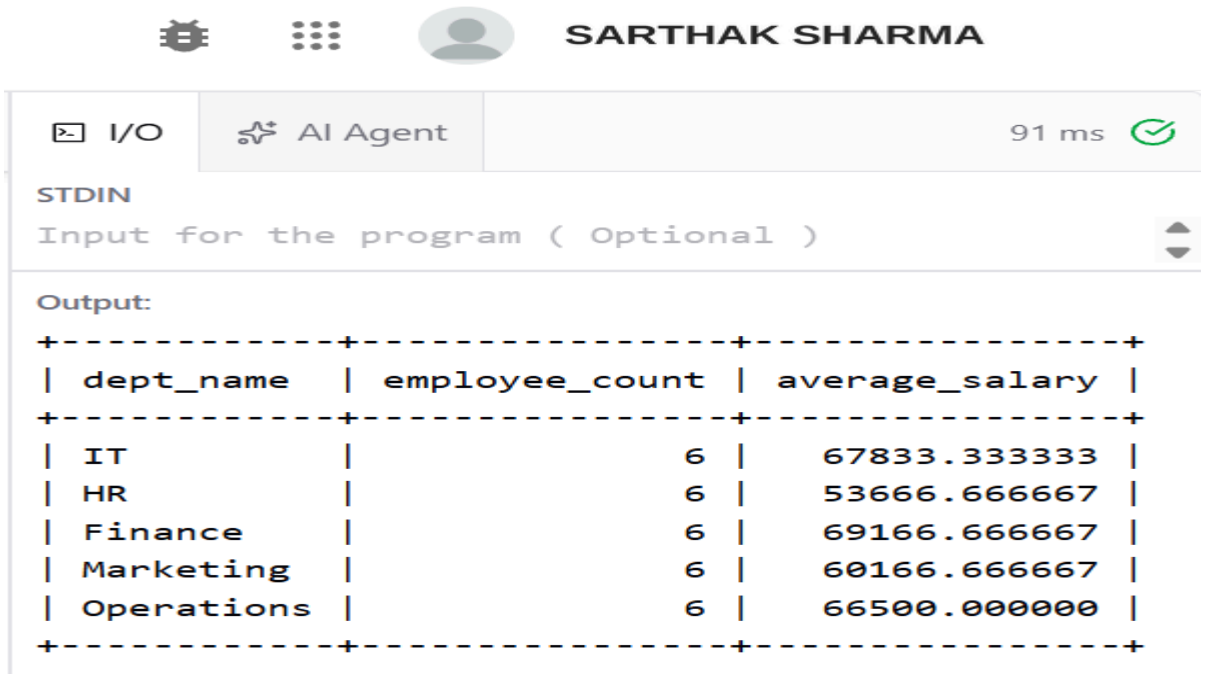

4. GROUP BY

Display the number of employees and average salary in each department.

```
SELECT
    d.dept_name,
    COUNT(e.emp_id) AS employee_count,
    AVG(e.salary) AS average_salary
FROM Department d
JOIN Employee e
ON d.dept_id = e.dept_id GROUP BY d.dept_id, d.dept_name;
```

OUTPUT

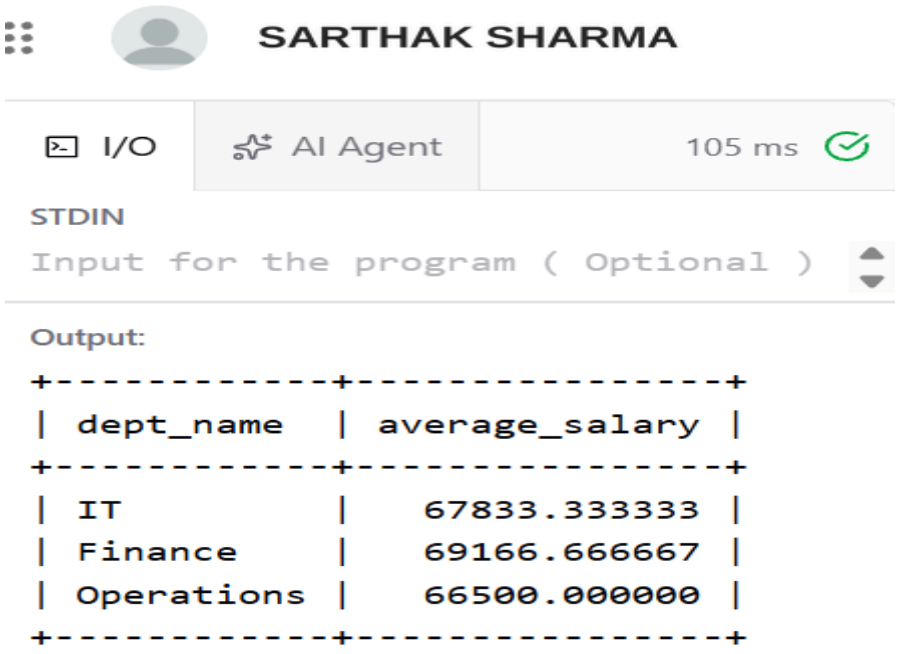

5. HAVING

Display departments whose average salary is greater than 65,000.

```
SELECT
    d.dept_name,
    AVG(e.salary) AS average_salary
FROM Department d
JOIN Employee e
ON d.dept_id = e.dept_id
GROUP BY d.dept_id, d.dept_name
HAVING AVG(e.salary) > 65000;
```

OUTPUT

---

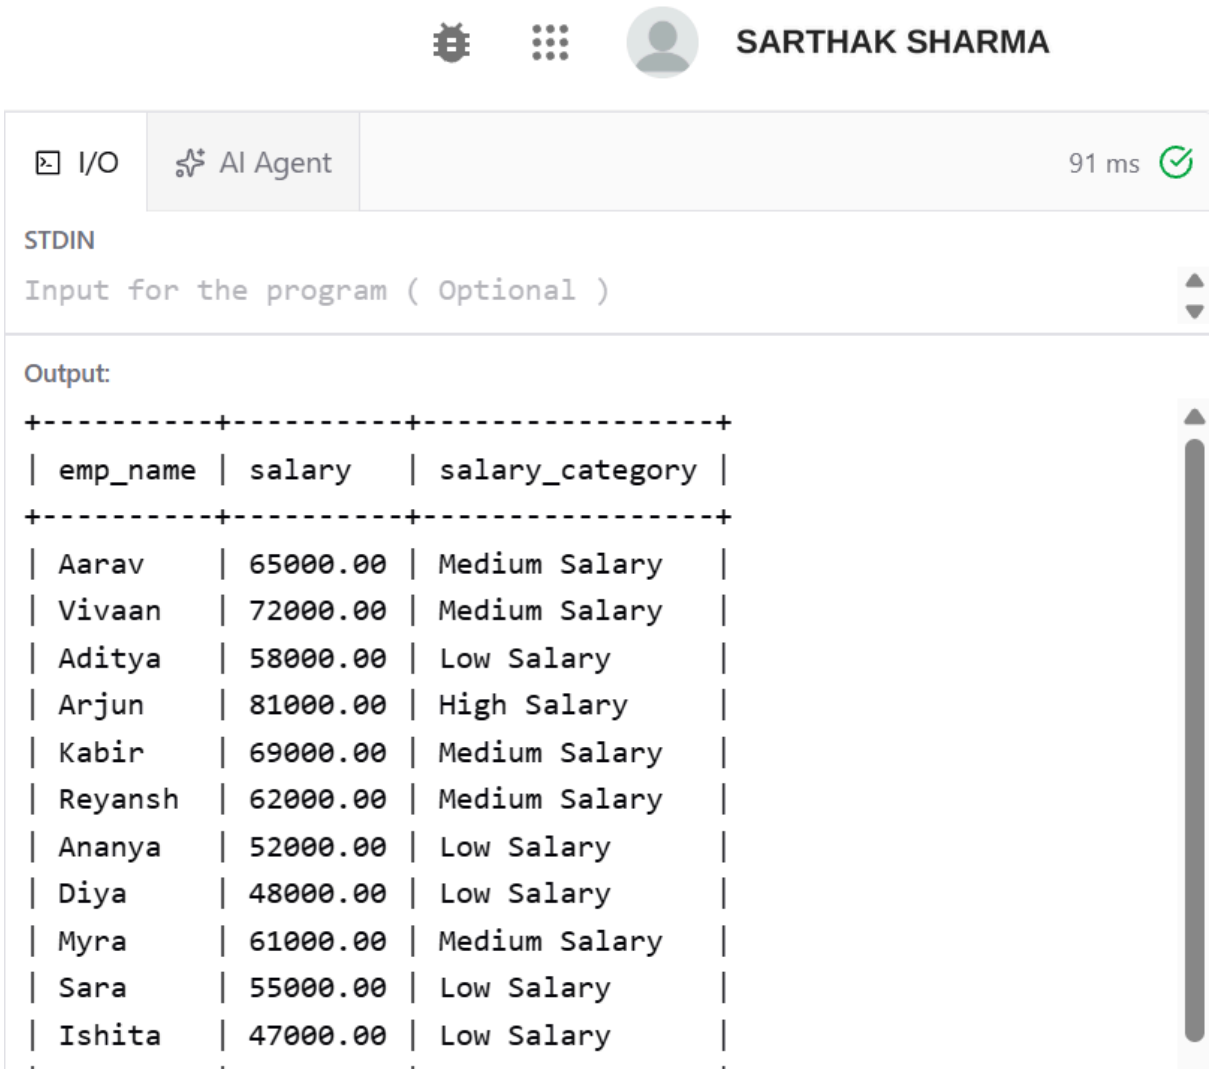

6. CASE Expression

Classify employees according to their salary.

```
SELECT
    emp_name,
    salary,
    CASE
```

```
    WHEN salary >= 75000 THEN 'High Salary'
    WHEN salary >= 60000 THEN 'Medium Salary'
    ELSE 'Low Salary'
  END AS salary_category
FROM Employee;
```

OUTPUT

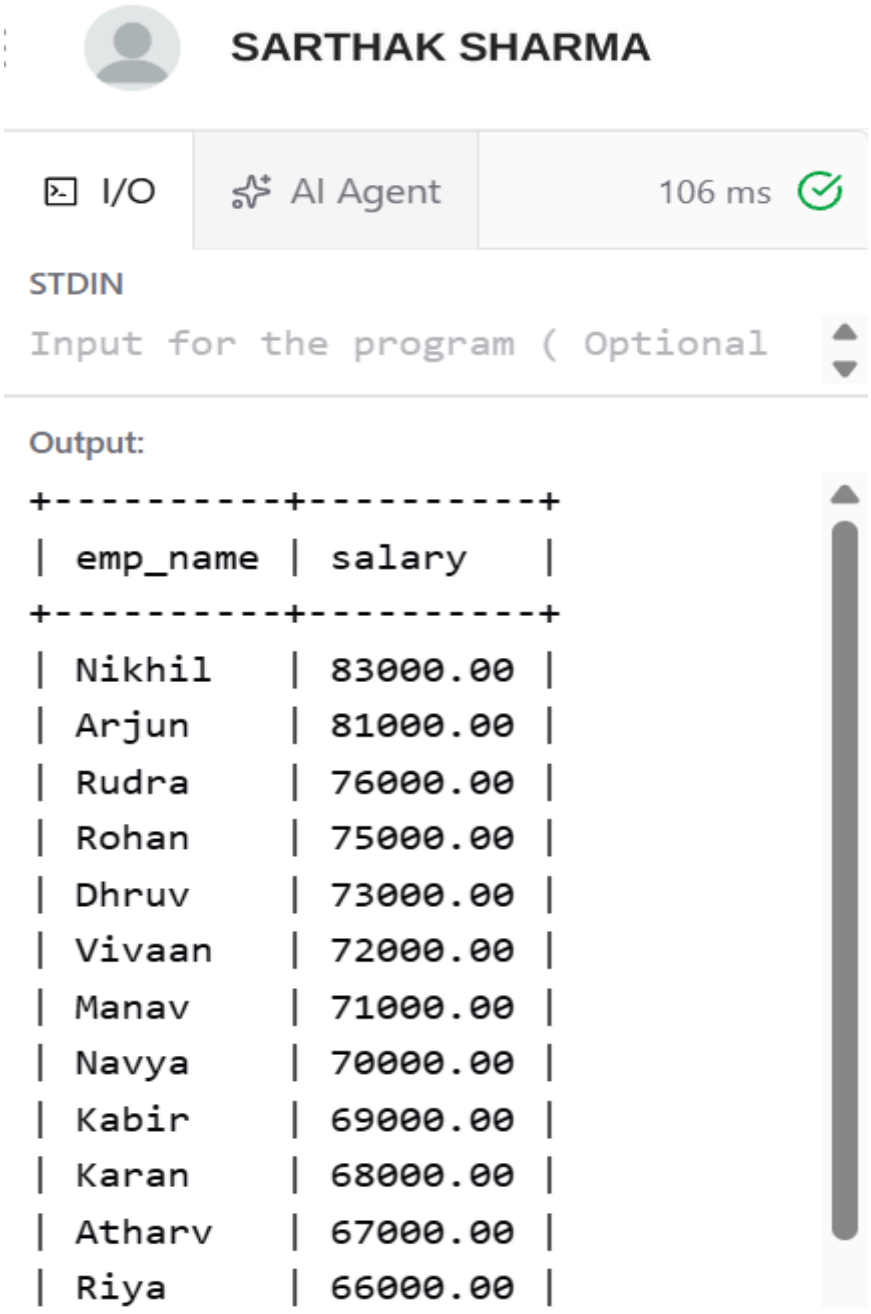

...

7. ORDER BY

Display employees in descending order of salary.

```
SELECT emp_name, salary
FROM Employee
ORDER BY salary DESC;
```

OUTPUT

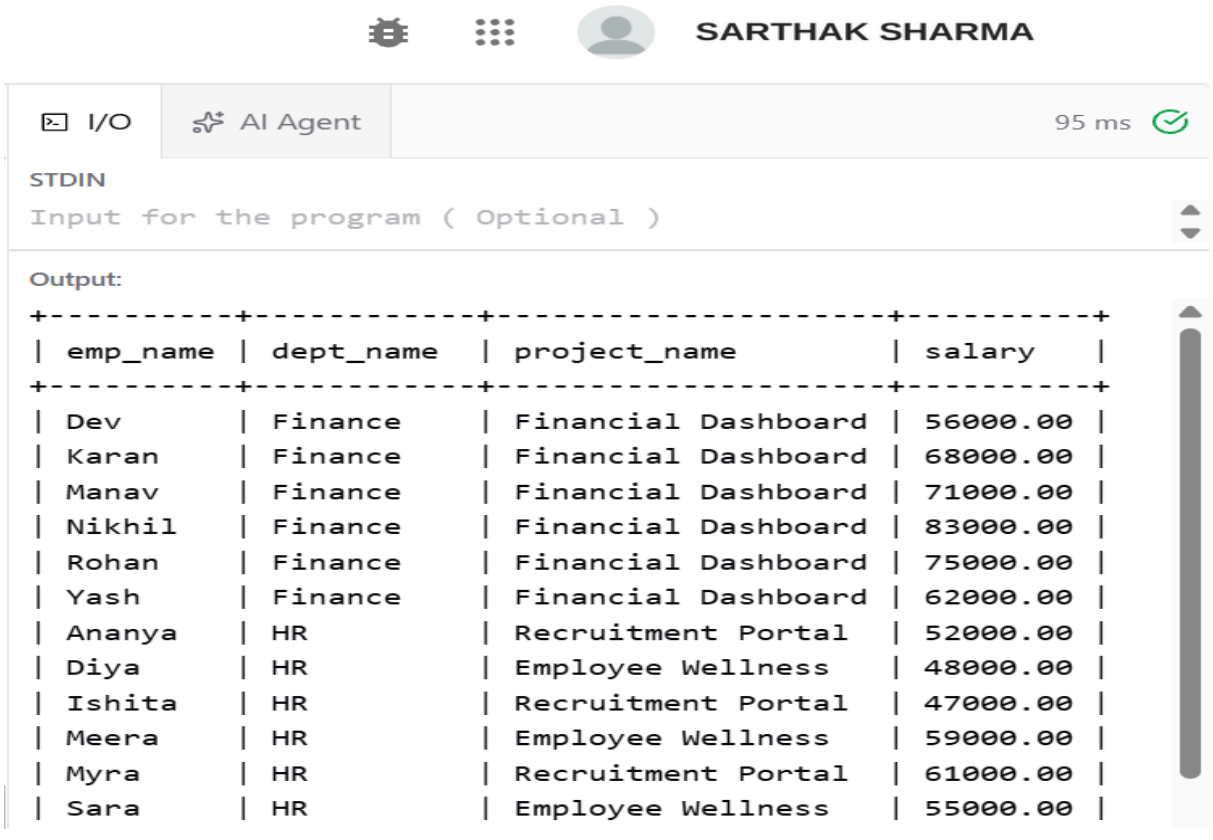

8. JOIN Employee, Department and Project

Display employee name, department, project and salary.

```
SELECT
    e.emp_name,
    d.dept_name,
    p.project_name,
    e.salary
FROM Employee e
JOIN Department d
ON e.dept_id = d.dept_id
JOIN Project p
ON e.project_id = p.project_id
ORDER BY d.dept_name, e.emp_name;
```

OUTPUT
